

OMOYEMI JOHN ARIGBANLA

+234 9069493227 | yemmyharry@gmail.com | [LinkedIn](#) | [Github](#) | Lagos, Nigeria

CORE SKILLS

<i>Programming Languages:</i>	Golang, TypeScript, JavaScript
<i>Web Technologies:</i>	RESTful APIs, Microservices, gRPC, Gin, Gorilla Mux, Go-Chi, React, Tailwind, HTML, CSS, Bootstrap, JWT, OAuth, WebSockets, Swagger, etc
<i>Databases:</i>	SQL, MySQL, Postgres, MongoDB, GORM, Redis, Neo4j
<i>Frameworks:</i>	Go-Gin, Go-chi, Gorilla Mux, Fiber, React
<i>Bitcoin / Lightning:</i>	btcld, Lightning payments, Zeus LN, Fedimint, BIPs (32/39/44), custodial ledgers and escrow
<i>Software / Tools:</i>	Github, Gitlab, Bitbucket, CI/CD, Docker, Railway, RabbitMQ, Confluence, Postman, Swagger, Jira.

PROFESSIONAL EXPERIENCE

Ipilẹ Labs, Nigeria — Founder & Developer (Golang, React) **2026 - Date**

- Building a Bitcoin and Lightning wallet for Africa across WhatsApp, Telegram and a web app, one account on all three, in beta on Signet (ipile-labs.up.railway.app).
- Built the Go backend: Postgres ledger with a continuous audit that every sat is accounted for, HTTP API, Redis-cached rates, and natural-language payment commands.
- Integrated Lightning via Voltage, enabling real-time deposits and withdrawals across Lightning addresses, LNURL, and BOLT11 invoices.
- Shipped business accounts with payment links, API keys, team roles and bulk payments, and a marketplace with escrow.
- Built the React, TypeScript and Tailwind PWA; CI runs vet, the full test suite against Postgres and the web build.

Clooza, Nigeria — Backend Developer (Golang) **Nov 2024 - Date**

- Designed and maintained scalable backend services using Golang.
- Implemented WebSockets for real-time notifications and FFmpeg for media processing.
- Built and integrated payments via Paystack, Flutterwave, and Bitcoin Lightning.
- Managed MongoDB for transactions and Neo4j for complex user-event relationships.
- Assisted in frontend development by generating screens for new features.

Btrust Builders — Software Engineering Fellow & Open Source Developer **Jan 2024 - Date**

- Developed a Bitcoin Explorer app using Golang (btcld) for the backend and React for the frontend.
- Contributed to Bitcoin open-source projects, including Zeus LN, btcld, and Fedimint clientd.
- Created educational content for [Bitcoin Indonesia](#).
- Maintained and collaborated on open-source repositories, ensuring code quality and best practices.

Trigan, Scotland — Backend Developer (Golang) **May 2023 – Oct 2024**

- Developed and optimized system features for scalability and performance.
- Refactored codebases to improve maintainability and efficiency.
- Implemented new backend functionalities and resolved performance bottlenecks.
- Conducted code reviews to enforce best practices.

Performanta, UK — Software Developer (Golang and React) **May 2022 – Aug 2022**

- Led frontend development, optimizing a React-based web application.
- Integrated frontend with backend services for smooth API communication.
- Assisted in managing gRPC microservices, debugging issues, and maintaining interactions.
- Contributed backend fixes in Golang, ensuring stability and performance.
- Supported the transition from gRPC microservices to a REST monolith, refactoring API calls for compatibility.

Decagon, Nigeria — Backend Engineer (Golang) **June 2021 – April 2022**

- Contributing to user requirements elicitation, project planning, design, and development of software projects in an agile environment.
- Worked on Golang microservice and monolith systems, including payment integrations for different products.
- Worked on a property listing application called secured-space fashioned after the famous Airbnb.
- Containerized applications using docker: Created docker files, built docker images, spun docker containers, created docker and docker-compose files etc.
- Proficient in the use of SQL databases such as Mysql and Postgres and NoSQL database such as MongoDB

- Developed RESTful APIs for high-performance applications.
 - Optimized data retrieval and storage using NoSQL databases.
 - Collaborated in agile workflows to deliver features efficiently.
 - Documented API endpoints and system architecture for maintainability.
-

PROJECTS

Ipilẹ Labs | [Live](#)

Golang | React | Postgres | Lightning

A Bitcoin and Lightning wallet for individuals and businesses across Africa, reachable from WhatsApp, Telegram and a web app. Beta on Signet; custodial today, with withdrawal to the user's own wallet.

- Designed a channel-agnostic core so every chat channel and the web API share one intent pipeline and one ledger.
- Added a ledger audit and an admin solvency check, and a public stats endpoint with no personal data.

Bitcoin Network Explorer | [Github](#)

Golang | Btcd | React

A BTC Network Monitor - a tool designed to track and analyze real-time activity on the Bitcoin blockchain network. It monitors transactions, block confirmations, network health, mempool size, hash rate, mining difficulty, and peer connectivity.

- Integrated btcd to allow users search for Bitcoin transactions, blocks, addresses, etc.
- Developed a searchable transaction history with real-time updates.
- Designed an intuitive UI for displaying blockchain transactions, blocks, and wallet information.

Secured Space | [Github](#)

Golang | Go-gin | Gorm | React

A platform where owners and agents can create apartments for potential tenants to rent.

- Developed a JWT-based authentication system with role-based access control.
- Implemented CRUD operations for listings, bookings, and user management.
- Designed an advanced search system with filters for price, location, and amenities.
- Built agent/tenant dashboards to manage listings, inquiries, and transactions.

(LNG) Ordering & Tracking App

Golang | Mongo | Redis-Pub/Sub

A Liquefied Natural Gas (LNG) Ordering & Tracking App - a specialized platform enabling users to place orders, schedule deliveries, and monitor the real-time location and status of LNG shipments.

- Developed new services using Golang's hexagonal architecture.
- Implemented authentication with JWT and used Redis Pub/Sub for service-to-service communication, ensuring efficient event-driven updates between microservices.
- Created scalable microservices for real-time order tracking.

Event Management System

Golang | Mongo | Neo4j

An Event Management System that streamlines the complete event lifecycle from booking to ticketing. The system leverages Neo4j to efficiently manage complex event-user relationships and optimize recommendation capabilities, with payment integrations including credit cards and cryptocurrencies via multiple gateways.

- Integrated Neo4j for handling complex event relationships and user interactions.
- Implemented secure payment processing using Flutterwave, Paystack, and Bitcoin.
- Developed role-based access control for different user types.

Managed Service Portal

Golang | React

An online platform offering clients centralized access to cybersecurity services, reporting, and support: security incidents, alerts, threat intelligence, compliance reports, and assessment status.

- Developed React-based dashboards for real-time threat intelligence and incident tracking.
 - Integrated reporting features to generate compliance audits and security assessments.
 - Built secure API integrations for fetching and displaying threat alerts.
-

EDUCATION AND CERTIFICATIONS

- Bachelor's Degree, Computer Science — Protestant University
- Higher National Diploma, Petroleum Engineering — Petroleum Training Institute, Nigeria
- Qala Bitcoin Protocol Development Course
- Qala Mastering Bitcoin Course
- Scrum Fundamentals Certified (SFC)
- TUNGA Data Structures and Algorithms
